
Olympus BX51 Microscope

The Olympus BX51 Microscope provides easy to operate control with a rigid, compact foot print, built to hold a wide variety of heavy accessories. This lab microscope comes with a bright 100w halogen light ideal for transmitted light, with adjustable light intensity and a preset button for reproducible lighting in photomicrography. This modular lab microscope can accept a wide variety of video attachments, and film cameras, as well as upgrade to a fluorescence microscope with the addition of the BX-URA2 or BX-RFA attachment. This lab microscope features 25 mm vertical stage movement with coarse adjustment limit stop, torque adjustment for coarse adjustment knobs, variable positions stage mounting and high-sensitivity fine focusing knob adjustable in 1µm graduation. The Olympus BX51 also comes with a 10, 20 & 40X dry objectives and 100x wet objective.
